Math 250: Number Theory Instructor: David Zureick-Brown ("DZB")

All assignments

Last updated: January 30, 2024 Gradescope code: ZWK583

Show all work for full credit!

Proofs should be written in full sentences whenever possible.

Contents

1	(due Feb 08): Introduction to course; squares, triangles, and Pythagorean triples.	2
2	(due Feb 15): TBA	3
3	(due Feb 22): TBA	4
4	(due Feb 29): TBA	5
5	(due Mar 07): TBA	6
6	(due Mar 14): TBA	7
	(On Mar 14): Midterm 1	8
7	(due Mar 28): TBA	9
8	(due Apr 04): TBA	10
9	(due Apr 11): TBA	11
10	(due Apr 18): TBA	12
	(On Apr 23): Midterm 2	13
11	(due Apr 25): TBA	14
12	(due May 02): TBA	15
13	(Not due): TBA	16
	(On May ??): Final Exam	17

Assignment 1: Introduction to course; squares, triangles, and Pythagorean triples.

Due by 11:25am, eastern, on Thursday, Feb 08

Suggested readings for this problem set: Chapters 1, 2, 3

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Feb 08, 11:25am, via Gradescope (ZWK583):

- 1. The first two numbers that are both squares and triangles are 1 and 36. Find the next one and, if possible, the one after that. Can you figure out an efficient way to find triangular-square numbers? Do you think that there are infinitely many?
- 2. Try adding up the first few odd numbers and see if the numbers you get satisfy some sort of pattern. Once you find the pattern, express it as a formula. Give a geometric verification that your formula is correct.
- 3. The consecutive odd numbers 3, 5, and 7 are all primes. Are there infinitely many such "prime triplets"? That is, are there infinitely many prime numbers p such that p + 2 and p + 4 are also primes?
- 4. It is generally believed that infinitely many primes have the form $N^2 + 1$, although no one knows for sure.
 - (a) Do you think that there are infinitely many primes of the form $N^2 1$?
 - (b) Do you think that there are infinitely many primes of the form $N^2 2$?
 - (c) How about of the form $N^2 3$? How about $N^2 4$?
 - (d) Which values of a do you think give infinitely many primes of the form $N^2 a$?

Recall that $(a, b, c) \in \mathbb{Z}^3$ is a **Pythagorean triple** if each of a, b and c are positive integers and $a^2 + b^2 = c^2$.

- 5. Do there exist any Pythagorean triples such that a = 1? Prove your answer.
- 6. Suppose that (a, b, c) is a Pythagorean triple such that a is prime. Prove that c = b + 1.
- 7. Let *m* and *n* be numbers that differ by 2, and write the sum $\frac{1}{m} + \frac{1}{n}$ as a fraction in lowest terms. For example, $\frac{1}{2} + \frac{1}{4} = \frac{3}{4}$ and $\frac{1}{m} + \frac{1}{n} = \frac{8}{15}$.
 - (a) Compute the next three examples.
 - (b) Examine the numerators and denominators of the fractions in (a) and compare them with the table of Pythagorean triples on page 18. Formulate a conjecture about such fractions.
 - (c) Prove that your conjecture is correct.
- (a) Use the lines through the point (1, 1) to describe all the points on the circle $x^2 + y^2 = 2$ whose coordinates are rational numbers.
 - (b) What goes wrong if you try to apply the same procedure to find all the points on the circle $x^2 + y^2 = 3$ with rational coordinates?

Assignment 2: TBA

Due by 11:25am, eastern, on Thursday, Feb 15

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Feb 15, 11:25am, via Gradescope (ZWK583):

Assignment 3: TBA

Due by 11:25am, eastern, on Thursday, Feb 22

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Feb 22, 11:25am, via Gradescope (ZWK583):

Assignment 4: TBA

Due by 11:25am, eastern, on Thursday, Feb 29

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Feb 29, 11:25am, via Gradescope (ZWK583):

Assignment 5: TBA

Due by 11:25am, eastern, on Thursday, Mar 07

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Mar 07, 11:25am, via Gradescope (ZWK583):

Assignment 6: TBA

Due by 11:25am, eastern, on Thursday, Mar 14

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Mar 14, 11:25am, via Gradescope (ZWK583):

Midterm 1 study guide

In class on Thursday,

Content: The questions will all be either

- 1. homework problems,
- 2. suggested problems,
- 3. problems we worked in class, or
- 4. minor variations of one of these.

Problems with very long proofs or that involved some unusual trick will not be on the exam.

You are allowed to use any previous problem from class or from the homework (e.g., "additivity of divisibility" or "the 2 out of 3 rule") on the exam without reproving it, unless otherwise noted on the exam. (E.g., if I ask you to prove "additivity of divisibility" on the exam, you will need to prove this using only the definition of divisibility, and I will remind you of this in the statement of the problem.)

A typical exam will have one or two questions from each week of the course. You can expect problems about following:

TBA

For definitions, I want a definition, in prose (complete sentences), and I want "just" the definition, and not any additional facts about the definition. (E.g., if you give the definition of rational, do not include that a rational number can be written in reduced form; that is a fact about rational numbers not part of the definition of rational.)

Assignment 7: TBA

Due by 11:25am, eastern, on Thursday, Mar 28

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Mar 28, 11:25am, via Gradescope (ZWK583):

Assignment 8: TBA

Due by 11:25am, eastern, on Thursday, Apr 04

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Apr 04, 11:25am, via Gradescope (ZWK583):

Assignment 9: TBA

Due by 11:25am, eastern, on Thursday, Apr 11

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Apr 11, 11:25am, via Gradescope (ZWK583):

Assignment 10: TBA

Due by 11:25am, eastern, on Thursday, Apr 18

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Apr 18, 11:25am, via Gradescope (ZWK583):

Midterm 2 study guide

In class on Thursday,

Content: The questions will all be either

- 1. homework problems,
- 2. suggested problems,
- 3. problems we worked in class, or
- 4. minor variations of one of these.

Problems with very long proofs or that involved some unusual trick will not be on the exam.

You are allowed to use any previous problem from class or from the homework (e.g., "additivity of divisibility" or "the 2 out of 3 rule") on the exam without reproving it, unless otherwise noted on the exam. (E.g., if I ask you to prove "additivity of divisibility" on the exam, you will need to prove this using only the definition of divisibility, and I will remind you of this in the statement of the problem.)

A typical exam will have one or two questions from each week of the course. You can expect problems about following:

TBA

For definitions, I want a definition, in prose (complete sentences), and I want "just" the definition, and not any additional facts about the definition. (E.g., if you give the definition of rational, do not include that a rational number can be written in reduced form; that is a fact about rational numbers not part of the definition of rational.)

Assignment 11: TBA

Due by 11:25am, eastern, on Thursday, Apr 25

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, Apr 25, 11:25am, via Gradescope (ZWK583):

Assignment 12: TBA

Due by 11:25am, eastern, on Thursday, May 02

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, May 02, 11:25am, via Gradescope (ZWK583):

Assignment 13: TBA

Due ???

Suggested readings for this problem set: TBA

All readings are from Silverman, A Friendly Introduction to Number Theory.

Assignment: due Thursday, May 07, 11:25am, via Gradescope (ZWK583):

Final exam study guide

Final exam is May ???, ???pm, in SMUD 014.

The **last day of class** is Tuesday, May 7.

There will be office hours on before the exam. I will send out a survey to find a time that works for everyone who is planning to attend.

The final exam will be comprehensive.

The exam will be, roughly 8-10 questions, with multiple parts. Some questions will be "prove or disprove". For disproofs, please write out a counterexample as your disproof.

A typical exam will have roughly one or two questions from each week of the course. You can expect a subset of the following:

• TBA
