# MATH 220, Mathematical Reasoning and Proof MWF 1 - 1:50

### All assignments

Last updated: September 13, 2023 Gradescope code: 7DVWGG

# Contents

1	(due Sep	15):	Introduction	to course	. Mathematical	reasoning.	Logic.	2
2	(due Sep	22):	"Direct" prod	fs and di	visibility proble	ms.		4

# Assignment 1

**Topics**: Introduction to the course. Mathematical reasoning. Logic.

**Reading**: 1.1, 1.2, 1.5, 2.1, 2.2

Suggested problems (for extra practice; do not hand in): Handout 1

#### Assignment 1, due Friday, Sep 15, via Gradescope:

- 1. Write the negation of each of the following statements.
  - (a) All triangles are isosceles.
  - (b) Every door in the building was locked.
  - (c) Some even numbers are multiples of three.
  - (d) Every real number is less than 100.
  - (e) Every integer is positive or negative.
  - (f) If f is a polynomial function, then f is continuous at 0.
  - (g) If  $x^2 > 0$ , then x > 0.
  - (h) There exists a  $y \in \mathbf{R}$  such that xy = 1.
  - (i) (2 > 1) and  $(\forall x, x^2 > 0)$
  - (j)  $\forall \epsilon > 0, \exists \delta > 0$  such that if  $|x| < \delta$ , then  $|f(x)| < \epsilon$ .
- 2. Write the converse, contrapositive, and negation of each of the following implications.
  - (a) If a quadrilateral is a rectangle, then it has two pairs of parallel sides.
  - (b)  $(P \land \neg Q) \Rightarrow R$
  - (c)  $P \Rightarrow (R \Rightarrow \forall x, Q(x))$
- 3. Let P and Q be statements. Write the truth table for
  - (a)  $(\neg P) \lor Q$
  - (b)  $(P \wedge (\neg Q)) \Rightarrow Q$
- 4. Are the statements  $(P \vee Q) \wedge R$  and  $P \vee (Q \wedge R)$  equivalent? If so, give a proof. If not, explain why by giving a counterexample.

(Two statement forms are equivalent if they have the same truth tables, and here, a counterexample simply means some choice of truth values for P, Q, and R such that the two statement forms give different outputs.)

- 5. Let P and Q be statements.
  - (a) Prove that  $\neg(P \Rightarrow Q)$  is equivalent to  $P \land \neg Q$ .
  - (b) Prove that  $\neg(P \Rightarrow Q)$  is not equivalent to  $\neg P \land Q$ .

- (c) Give an example of statements P and Q such that  $\neg P \Rightarrow \neg Q$  is true and  $\neg (P \Rightarrow Q)$  is false.
- 6. Suppose that n is an even integer, and let m be any integer. Prove that nm is even.
- 7. Suppose that n is an odd integer. Prove that  $n^2$  is an odd integer. (Hint: an integer n is odd if and only if there exists an integer k such that n = 2k + 1.)
- 8. Prove that if  $n^2$  is even, then n is even. (Hint: page 67.)

## Assignment 2

Topics: "Direct" proofs, proof by cases, and divisibility problems.

#### Reading:

- 3.3, from Definition 3.3.6
- 6.4, just Definition 6.4.1
- see Index to find definitions like prime, etc

#### Suggested problems (do not hand in)

1. Handout 2

#### Assignment, due Friday, Sep 22, via Gradescope:

- 1. Suppose that  $a \mid b$ . Prove that for all  $n \in \mathbb{Z}_{>0}$ ,  $a^n \mid b^n$ .
- 2. Suppose that there exists an integer  $n \in \mathbb{Z}_{>0}$  such that  $a \mid b^n$ . Is it true that  $a \mid b$ ? Prove or disprove your answer. (For a disproof, please give a counterexample that demonstrates that the statement is false.)
- 3. Prove that for all  $a \in \mathbb{Z}$  and for  $n \in \mathbb{Z}_{>0}$ , a-1 divides  $a^n-1$ .
- 4. Prove that for all integers n, n and n+1 have no common divisors other than  $\pm 1$ .
- 5. Prove that if x is an integer, then  $x^2 + 2$  is not divisible by 4. (Hint: there are two cases: x is even, x is odd. Also, feel free to use basic facts about even or odd, e.g., "odd + odd = even", without additional proof.)
- 6. Prove that the product of three consecutive integers is divisible by 6. (It suffices to prove that it is divisible by 2 and 3 separately.)
- 7. Show that for all integers a and b,

$$a^2b^2(a^2-b^2)$$

is divisible by 12. (It suffices to prove that it is divisible by 4 and 3 separately.)

8. Find all positive integers n such that  $n^2 - 1$  is prime. Prove that your answer is correct.
